

Twidy Kwae

619-418-6061 | twidykwae20@gmail.com | github.com/twidykwae | twidykwae.xyz | Upland, IN

Education

Taylor University

Expected Graduation: May 2028

Bachelor of Science in Computer Science, AI and Machine Learning Concentration, Minor: Data Science

Relevant coursework: Statistics, Data Visualization, Machine Learning, Data Structures and Algorithms, Data Science, Introduction to AI, Data Mine, Calculus

Skills: Python, SQL, Java, Kotlin, Next.js, TensorFlow, Pandas, Agentic AI Development, Prompt Engineering, Microsoft Fabric, Git, Tableau, Feature Engineering, Data Cleaning, Artificial Intelligence, PowerBI, AWS, LLMs

Experience

Founder, Cadence

June 2026 – Present

- Grew Cadence to **200+** users across top universities and **\$1,000** in revenue as a sophomore founder by building an academic planning platform on the Anthropic API that turns any student's syllabi into a personalized, coached semester plan.
- Compressed hours of manual semester planning into under a minute by shipping automatic deadline extraction, workload heatmaps, and weekly AI coaching, owning product, engineering, and growth end to end.

Software Developer Intern, Aprize PBC, Upland, IN

June 2026 – August 2026

- Drove real client revenue by turning raw entity and transaction data into Donor Insight Reports sold to paying customers, building the analysis that surfaced high value fundraising prospects and giving patterns.
- Scaled the platform past **10M** rows for entity and transaction resolution by rebuilding the production database from Supabase onto a Delta Lake on OneLake and validating **30M+** rows through the migration.
- Unified fragmented public and private funding data into one queryable source by designing a medallion architecture in Microsoft Fabric and engineering ETL pipelines across IRS filings and private company data.
- Hardened data quality across the pipeline by building and debugging entity resolution logic that caught and corrected mismatched and duplicate records at scale.

Technology Specialist, Taylor University, Upland, IN

May 2026 – Sept. 2026

- Own the technology behind the Center for Innovation and Excellence by running its HubSpot CRM, keeping contact data clean and event communication on time across campus and entrepreneurship programs.
- Cut signup friction for CIE programs by designing and maintaining the event registration forms students use to enroll.
- Helped bring new entrepreneurship events to life by partnering with the CIE team to shape and execute them from idea to launch.

Field First Technician, Taylor University, Upland, IN

March 2025 – June 2026

- Resolved **95%** of issues for **2000+** students, faculty, and staff by troubleshooting hardware, software, and network problems across a full university campus.
- Cut workstation setup time by **40%** by automating deployment and configuration with Bash scripts, while tracking every incident to resolution in TeamDynamix.
- Kept campus endpoints secure and online by diagnosing network problems, running system diagnostics, and enforcing endpoint security compliance.

Android Developer, Lightsys Technology Services

March 2026, five day codeathon

- Delivered working speech recognition for the Learn Evenki language preservation app by engineering a Mel Frequency Cepstral Coefficients (MFCC) and Dynamic Time Warping (DTW) pipeline in a single five day build sprint.

- Made the app easier to learn from by implementing quiz features and vocabulary tabs in Kotlin and Android Studio.
- Shipped the app to Google Play and RuStore by managing Git branching and versioning and coordinating the production release build.

Research Experience and Publications

Undergraduate Researcher, Taylor University Computer Science and Engineering

June 2026 – July 2026

- Contributed to a collaborative research paper by developing flight software for a student built CubeSat under faculty supervision, writing the mission routines behind onboard data handling and ground communication.

Projects

Three Point Evolution · [GitHub](#)

- Told the story of how the three point line reshaped the NBA across 47 seasons by pairing rigorous statistical analysis with a narrative data visualization walkthrough.

NBA Win Probability Prediction · [GitHub](#)

- Hit **95%** accuracy predicting NBA win probabilities by building and evaluating a logistic regression classifier on rolling performance features, validated with statistical hypothesis testing.

AI Battleship Player · [GitHub](#)

- Beat competing agents **80%** of the time by engineering a C++ game AI driven by probabilistic targeting and Monte Carlo simulation.
