EDUCATION

Taylor University, Upland, IN Expected May 2028
Bachelor of Science in Computer Science, Concentration in Artificial Intelligence and Machine Learning, Minor in Data Science
Relevant coursework: Statistics, Data Visualization, Machine Learning, Data Structures and Algorithms, Data Science, Introduction to AI, The Data Mine, Calculus

SKILLS

Python, SQL, Java, Kotlin, Next.js, TensorFlow, Pandas, Agentic AI Development, Prompt Engineering, Microsoft Fabric, Git, Tableau, Feature Engineering, Data Cleaning, PowerBI, AWS, LLMs

EXPERIENCE

Founder June 2026 to Present
Cadence, Remote

- Grew Cadence to 200+ users across top universities and \$1,000 in revenue as a sophomore by building an academic planning platform on the Anthropic API that turns a student's syllabi into a personalized semester plan.
- Turned a stack of syllabi into a full semester plan in under a minute by shipping automatic deadline extraction, workload heatmaps, and weekly coaching, and owned product, engineering, and growth end to end.

Software Developer Intern June 2026 to August 2026
Aprize PBC, Upland, IN

- Turned raw entity and transaction data into Donor Insight Reports sold to paying clients by building the analysis that surfaced fundraising prospects and giving patterns.
- Grew the platform's capacity past 10M rows for entity and transaction resolution by migrating the production database from Supabase to Delta Lake on OneLake and validating 30M+ rows in the move.
- Made public and private funding data queryable in one place by designing a medallion architecture in Microsoft Fabric and building ETL pipelines across IRS filings and private company sources.
- Improved data quality across the pipeline by building and debugging entity resolution logic that caught mismatched and duplicate records.

Technology Specialist May 2026 to September 2026
Taylor University, Center for Innovation and Excellence, Upland, IN

- Kept contact data clean and event communication on time for the Center for Innovation and Excellence by running its HubSpot CRM across campus and entrepreneurship programs.
- Cut signup friction for CIE programs by building and maintaining the event registration forms students use to enroll.
- Helped launch new entrepreneurship events by working with the CIE team to shape and run them from idea to execution.

Field First Technician March 2025 to June 2026
Taylor University, Upland, IN

- Resolved 95% of issues for 2000+ students, faculty, and staff by troubleshooting hardware, software, and network problems across campus.

- Cut workstation setup time by 40% by automating deployment and configuration with Bash scripts, and tracked every incident in TeamDynamix.
- Kept campus endpoints secure and online by diagnosing network problems, running system diagnostics, and maintaining security compliance.

Android Developer

March 2026, five day codeathon

Lightsys Technology Services

- Gave the Learn Evenki language preservation app working speech recognition by building an MFCC and Dynamic Time Warping pipeline during a five day build sprint.
- Made the app easier to learn from by implementing quiz features and vocabulary tabs in Kotlin and Android Studio.
- Shipped the app to Google Play and RuStore by managing Git branching and versioning and coordinating the release build.

RESEARCH EXPERIENCE AND PUBLICATIONS

Undergraduate Researcher

June 2026 to July 2026

Taylor University, Computer Science and Engineering

- Contributed to a collaborative research paper by developing flight software for a student built CubeSat under faculty supervision. pillars.taylor.edu/cse-faculty-student-projects/1

PROJECTS

Three Point Evolution. Traced how the three point line reshaped the NBA across 47 seasons by pairing statistical analysis with a narrative data visualization walkthrough.

NBA Win Probability Prediction. Reached 95% accuracy predicting NBA win probabilities by building and evaluating a logistic regression classifier on rolling performance features with statistical hypothesis testing.

AI Battleship Player. Reached an 80% win rate against competing agents by building a C++ game AI with probabilistic targeting and Monte Carlo simulation.
